160	4000	25

Description

SIP is intended for insulating circular ventilation ducts that require condensation protection and/or thermal insulation.

The sleeve is produced from glass wool with thickness 25 or 50 mm insulation and has an external jacket made of age-resistant polyethylene plastic. The jacket is also diffusion tight.

Thermal conductivity: $\lambda = 0.037 \text{ W / m K}$.

An internal transparent plastic sleeve allows for easy installation.

Temperature range:

-30°C to +70°

Order code

Product	SIP
Dimension	100
Length	3000
Insulation thickness	50

Order example: SIP-100-3000-50
